

## Shell Nigeria—Bonga FPSO

Acotec nv

**Facts:**

- Description of the project:

Humidur is applied on sweating lines. Even though the surface is not dry and therefore does not meet the standard specifications, Humidur gives excellent results on these kind of surfaces. The surface preparation remains the same, but during the application a small area is wiped down with an absorbing cloth and coated immediately after. This procedure is repeated until the whole surface is coated. Humidur is also applied as non-skid coating.

- Date:

2016

- Name client:

Shell Nigeria Exploration Production Company (SNEPCo)

- Location

FPSO Bonga

Nigeria

- Applied products:

HUMIDUR®

Sweating lines
