lalinea welcome to the next level

"I play with space like no other wall. I define rooms in a new way, with minimal lines and maximum transparency. This enables me to give you spatial freedom."

Continuous innovation is what Maars Living Walls is known for. With lalinea, Maars has achieved a new level of refinement and technical perfection. lalinea was developed in collaboration with a leading international architectural firm with minimalist design as the starting principle, and was designed for the upper end of the market. This unique wall was realised through the application of newly developed techniques. The extremely slim, continuous lines of the top and bottom sections, the patented flush glass connections and the absence of vertical sections make the aesthetics of lalinea unique. The maximum transparency creates an unparalleled sense of freedom and space.

The top and bottom profiles are the lowest in the world, only 22 mm high with a tolerance range of +/- 13 mm.

The patented adjustable floor and ceiling connections are unique as well. The sections are available in (brushed) anodised aluminium or with a powder coating in any desired colour.

A new level of transparency

In the transparent lalineia office, you feel like there are no boundaries, thanks to the barely visible line between the rooms and the corridors. At the same time, the high acoustical performance of the lalineia system wall – which can be up to 48 dB Rw – enables you to focus on your work.

Unlimited combinations

The lalineia glazed walls can be combined with the slim, solid Maars walls, made from materials such as steel, wood, veneer, fabric and leather. We can offer seamless connection in every possible combination. Our powder coating installation enables us to provide steel panels and sections in any colour. Also wood, veneer, fabric and leather are available in many different colours.

Living Options

The closed wall panels allow for the integration of light, air, visuals, sound and climate control, such as our patented ventilation studs, dolby surround panels and in-wall multimedia flat-screens. In our Living Options program you will find the many surprising options.

A new freedom in design

*"I combine minimalist art with high tech.
Allow yourself to be inspired by my
aesthetics and discover the new design
freedom that my technology offers you."*

lalineia means a revolution in every aspect. The double glazed wall is only connected at the horizontal ends, creating a continuous glass wall with subtle joints. A glazed wall that even continues into the door modules, allowing the doors to be flush with the glass wall. In other words, lalineia does not have traditional door sections. The top and bottom sections, which are only 22 mm high, continue on in the doors. The invisible hinges and the new, exceptionally slim lock allows for the thinnest door sections. The unique pivot construction has been tested for more than 100,000 cycles. The automatic threshold is adjustable. In corners, the glazed walls can be connected without any sections.

Invisible hinges because of unique pivot construction.

Fully glazed T-connection.

Flush glazing.

Uniquely narrow lock.

The minimalist bottom and top sections create a continuous line.

Lowest floor and ceiling sections in the world.

Maars Living Walls

Maars is present in over 45 countries and has a worldwide network of selected dealers. Therefore the highest quality and the best service are guaranteed. A ten-year product warranty is standard. It goes without saying that Maars is also the best choice for maintenance. After all, we know our products best. Therefore, we offer an competitive maintenance contract and the certainty that our products and components are available for a long period of time. "Think global, act local" may be a cliché, but for Maars it most definitely applies. In our international organisation, all disciplines live under the same roof: product development, production, installation and after-sales.
